SUMMARY

Unity game developer with 3.5+ years of production C# across mobile and Windows 3D products. Designed and built the core client architecture, bot opponent AI, animation systems, and mobile performance work for a live real-time multiplayer title on iOS and Android. Also led development of a photorealistic character creator, where a Jobs System rewrite made exports 50x faster, and solved real-time IK hand placement for a 3D scene tool.

TECHNICAL SKILLS

Languages & Fundamentals: C#, async/await and Task-based concurrency, SOLID principles, design patterns, 3D math
Unity: URP, UGUI, ScriptableObjects, Addressables, AssetBundles, Shader Graph, Timeline, Jobs System, Unity Profiler, custom editor tooling
Gameplay & Systems: Client-side architecture, modular and component architecture, game state management, bot opponent AI, turn-based decision logic, tutorial and onboarding systems, localization, custom raycasting and input handling
Multiplayer (client-side): Socket.IO, client state synchronization against an authoritative server, real-time event handling
Animation, Graphics & Physics: Spine 2D skeletal animation, 3D animation integration, Animation Rigging (IK), procedural hand and finger placement, particle systems, Unity physics
Performance: Mobile performance optimization, draw call and SetPass call reduction, LOD groups, texture atlasing, memory management, multithreading, NativeArray / CPU texture processing
Tools & Platforms: Git, Figma, Android, iOS, Windows

EXPERIENCE

Roothoot Private Limited — Hyderabad, India | Mar 2025 – Jun 2026
Unity Game Developer — *Client project for Pixel Stack Studios*
Pongz – SG Mahjong | Live real-time multiplayer | **40K+ downloads, ~3.4K daily active players** | Google Play | App Store

- Designed and built the **core client-side architecture** for a live real-time multiplayer Mahjong title on iOS and Android.
- Designed and built **AI Practice Mode** end to end: offline bot opponents, turn-based decision logic, and full gameplay flow.
- Designed and built the **2D and 3D animation systems**, including Spine skeletal animation and its integration with gameplay.
- Optimized **mobile performance** across live releases: reduced draw calls and SetPass calls using LOD groups and texture atlasing, profiled with the Unity Profiler.
- Implemented client-side Socket.IO event handling and state synchronization against an authoritative server.
- Built the **complete UI layer**: screens, HUD, in-game flow, and UI-to-systems integration.
- Built the interactive tutorial and onboarding flow and implemented multi-language localization.

Live Deftsoft Informatics Pvt. Ltd. — Mohali, India | Jun 2022 – Oct 2024
Unity Developer — *Client deliveries, Windows 3D tools*
Character Creator | Photorealistic character creation tool, Windows

- **Led development** of the tool and designed its core architecture; planned the work from client requirements and coordinated tasks across the team.
- Rebuilt the character export pipeline on the Unity Jobs System, merging layered 4K texture maps on NativeArray pixel data with no texture copies, raising **export throughput 50x**.
- Built customizable facial and body structure systems for photorealistic character generation.

Movie Studio 3D | 3D scene composition and previsualization tool, Windows

- Solved **real-time finger and hand placement** for imported rigged characters by computing IK targets from object surface geometry and bone structure, driven through Unity Animation Rigging; the problem had been open on the project for **over a year**.
- Rebuilt the **Timeline system**: horizontal layout, finer timestep control, and a more stable sequencing model.
- Built the Asset Manager, UI, hierarchy panel, and Graphics modules.
- Built a Unity editor tool to extract and manage in-project UI text.
- Built custom C# property attributes that expose object properties as editable fields in the application's UI.

EDUCATION

Diploma in Computer Science, Government Polytechnic College, Amritsar — 2019 – 2022
